SAFETY PRECAUTIONS

BEFORE OPERATION

When filling the fuel tank, do not smoke or use open flame in the immediate vicinity. Always provide a metal-to-metal contact between the container and the fuel tank. This will prevent a spark from being generated as fuel flows over metallic surfaces. Failure to observe this warning may result in death to personnel.

Make sure spark plug leads are disconnected before performing maintenance on the pump.

Avoid breathing smoke when using a monobromotrifluoromethane fire extinguisher.

DURING OPERATION

Never operate the reciprocating pump in an enclosed area unless the exhaust gases are piped to the outside. Exhaust gases contain carbon monoxide which is a colorless, odorless, and poisonous gas.

Do not fill the fuel tank while the engine is in operation. Gasoline spilled on a hot engine may explode and cause serious injury to personnel.

Do not attempt to perform any maintenance on the pump while the engine is running. Never operate the pump without a strainer on the suction line.

AFTER OPERATION

When lifting the pumping unit, be sure the lifting device has a lifting capacity of at least 750 lbs. Do not allow the pumping unit to swing while suspended. Failure to observe this warning may result in damage to the unit or severe injury to personnel.

Avoid breathing smoke when using a monobromotrifluoromethane fire extinguisher.

TM 5-4320-252-14, 11 December 1968, is changed as follows:

All changes, additions, or deletions of National stock numbers or manufacturer's part numbers should be appropriately reflected in the parts listing and index of the manual.

Page i. Immediately after title add the following:

REPORTING ERRORS AND RECOMMENDING IMPROVEMENTS

You can help improve this manual. If you find any mistake or if you know of a way to improve the procedures, please let us know. Mail your letter, DA Form 2028 (Recommended Changes to Publications and Blank Forms), or DA Form 2028-2 located in the back of this manual direct to: Commander, U.S. Army Troop Support Command, ATTN: AMSTR-MCTS, 4300 Goodfellow Boulevard, St. Louis, MO 63120-1798. A reply will be furnished directly to you.

In the table of contents the appendixes are superseded as follows:

APPENDIX A.	REFERENCES	A-1
APPENDIX B.	COMPONENTS OF END ITEM LIST	B-1
APPENDIX C.	MAINTENANCE ALLOCATION CHART	C-1
APPENDIX D.	REPAIR PARTS AND SPECIAL TOOLS LIST	D-1
APPENDIX E.	EXPENDABLE SUPPLIES AND MATERIALS LIST	E-1

Page ii. Illustrations C-1 through C-4 are reidentified as D-1 through D-4. Page numbers C-28, C-29, C-30, and C-32 are reidentified as D-28, D-29, D-30 and D-32.

Page 2. Paragraphs 1.1 and 1.2 are added after paragraph 1.

1.1 Scope

This manual contains instructions for the use of operator, organizational, direct support and general support personnel maintaining the pump as allocated by the Maintenance Allocation Chart. It provides information on the operation, preventive maintenance services, lubrication, and maintenance of the equipment, its accessories and components.

1.2 Forms and Records

DA Forms and records used for equipment maintenance will be only those prescribed by DA PAM 738-750.

Page 4. Paragraph 10B. In line 3, change "TM 5-2805-257-14" to read "LO 5-2805-257-12".

*This change supersedes C4, 29 December 1978 and C5, 20 October 1986.

COMPONENTS OF END ITEM LIST

Section I. INTRODUCTION

B-1. Scope

This appendix lists integral components of and basic items for the Diaphragm Pump to help you inventory items required for safe and efficient operation.

B-2. General

This components of End Item List is divided into the following sections:

a. Section II. Integral Components of the End Item. These items, when assembled, comprise the Diaphragm Pump and must accompany it whenever it is transferred or turned in. The illustrations will help you identify these items.

b. Section III. Basic Issue Items. These are the minimum essential items required to place the Diaphragm Pump in operation, to operate it, and to perform emergency repairs. Although shipped separately packed, they must accompany the Diaphragm Pump during operation and whenever it is transferred between accountable officers. The illustrations will assist you with hard-to-identify items. This manual is your authority to requisition replacement BII, based on TOE/MTOE authorization of the end item.

B-3. Explanation of Columns

a. Illustration. This column is divided as follows:

(1) Figure Number. Indicates the figure number of the illustration on which the item is shown.

(2) Item Number. The number used to identify item called out in the illustration.

b. National Stock Number. Indicates the National stock number assigned to the item which will be used for requisitioning.

c. Part Number. Indicates the primary number used by the manufacturer, which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items.

d. Description. Indicates the Federal item name, and, if required, a minimum description to identify the item.

e. Location. The physical location of each item listed is given in this column. The lists are designed to inventory all items in one area of the major item before moving on to an adjacent area.

f. Usable on Code. "USABLE ON" codes are included to help you identify which component items are used on the different models. Identification of the codes used in these lists are:

Code	Used On
BCU	

g. Quantity Required (Qty Reqd). This column lists the quantity of each item required for a complete major item.

h. Quantity. This column is left blank for use during an inventory. Under the Rcv'd column, list the quantity you actually receive of your major item. The Date columns are for your use when you inventory the major item at a later date, such as for shipment to another site.

Section II. INTEGRAL COMPONENTS OF END ITEMS

(1) Illustration		(2)	(3)	(4)	(5)	(6)	(7)	(8) Quantity

Page C-1. Appendix C is changed as follows:

Pages B-1 through B-6 are reidentified as pages C-1 through C-6.

Paragraphs B-1 through B-3 are reidentified as paragraphs C-1 through C-3.

Page D-1. Appendix D is changed as follows:

Pages C-1 through C-34 are reidentified as pages D-1 through D-34.

Paragraphs C-1 through C-8 are reidentified as paragraphs D-1 through D-8.

In Sections III and IV, Column 8a, all references to figure numbers will be changed from C to D.

Make the following changes in Section IV.

Section IV. REPAIR PARTS FOR DS AND GS MAINTENANCE

APPENDIX E

EXPENDABLE SUPPLIES AND MATERIALS LIST

Section I. INTRODUCTION

E-1. Scope

This appendix lists expendable supplies and materials you will need to operate and maintain the Diaphragm Pump. These items are authorized to you by CTA 50-970, Expendable Items (Except Medical, Class V, Repair Parts, and Heraldic Items).

E-2. Explanation of Columns

a. Column 1 - Item number. This number is assigned to the entry in the listing and is referenced in the narrative instructions to identify the material (e.g., "Using cleaning solvent, item 1, App. E").

b. Column 2 - Level. This column identifies the lowest level of maintenance that requires the listed item.

C - Operator/Crew

c. Column 3 - National Stock Number. This is the National stock number assigned to the item; use it to request or requisition the item.

d. Column 4 - Description. Indicates the Federal item name and, if required, a description to identify the item. The last line for each item indicates the part number followed by the Federal Supply Code for Manufacturer (FSCM) in parentheses, if applicable.

e. Column 5 - Unit of Measure (U/M). Indicates the measure used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation (e.g., ea, in, pr). If the unit of measure differs from the unit of issue, requisition the lowest unit of issue that will satisfy your requirements.

Section II. EXPENDABLE SUPPLIES AND MATERIALS LIST

(1) ITEM NUMBER	(2) LEVEL	(3) NATIONAL STOCK NUMBER	(4) DESCRIPTION	(5) U/M

FIGURE 1 RECIPROCATING PUMP.

CHAPTER I - GENERAL

1. Description - The REX Model MBG Diaphragm Pump is a positive displacement type pump powered by a military standard Model 2A016 (FSN 2805-072-4871) air cooled engine. The pump and engine are mounted on a common frame and is trailer mounted. 4" inlet and outlet valves are bolted to the pump body to which the suction and discharge lines are fitted. (Engine maintenance and parts are covered in TM 5-2805-257-14).

The main operating part of the pump is its flexible rubber diaphragm. The outer edge of the diaphragm is secured to the rim of the pump body. A connecting rod fastened to the diaphragm center moves it up and down. As it is lifted, it creates a vacuum which draws liquid into the pump body. As the diaphragm is forced down, it forms a pressure which simultaneously closes the inlet valve and opens the outlet valve.

FIGURE 1A
TRANSPORTATION DATA PLATE

2. Application - The Model MBG Diaphragm Pumps are utilized for dewatering jobs where the liquid carries a high percentage of trash, mud or sand, or where there is a variable seepage of water, such as in trench work.

Where slow water seepage and high suction lift is encountered, the use of a foot valve at the end of the suction line is recommended. This addition will facilitate priming and help maintain a dry excavation. (A foot valve is a flap type valve which opens with the suction stroke of the pump and closes with the discharge stroke, thus the suction line is always full of water after the suction line is filled.)

CAUTION: A strainer must be used on the suction hose to prevent entrance of stones into the pump.

3. Pump Data Plate - Engine Data Plate - Trans. Data Plate.

FIGURE 1B
PUMP DATA PLATE

FIGURE 1C ENGINE DATA PLATE

CHAPTER II — PREPARATION BEFORE USE

4. Unpacking and inspection — The pump is boxed and secured within the box. Upon unpacking, make a visual inspection for any damage or theft in transit. Manuals are contained in a canvas bag for each pump. If pump is to be lifted, see the transportation data plate (Fig. 1A) for lifting. Lifting "eyes" are provided on each side of the pump frame. Four 10' long sections of 4" diameter hose with two 4" diameter close nipples are contained in one box for each pump.
5. Assembly — The rubber diaphragm has been removed from the pump at the factory and must be reinstalled on the pump before operation. Remove preservative before installation. For installation of the rubber diaphragm, refer to Chapter IV, Paragraph 18.
Thread the 4" close nipples into the inlet and outlet valves. Nipples (A) must be tight with no air leaks. (Reference Fig. 4)

The towing bail may be extended or repositioned for easier hand towing.

Suction and discharge hose are connected to the pump at the jobsite.
6. Lubrication before use — The engine crankcase, pump gearcase and connecting rod bearing grease cup are filled to level points at the factory. However, before operation these points should be checked for oil levels. Refer to lubrication chart, Page 7, Fig. 9 for data.

FIGURE 2
PUMP INLET HOSE.

7. Selection and preparation of pump site — The pump inlet should not be located higher than 25 feet above the source of liquid to be pumped. (Fig. 2)

The pump is capable of pumping against a total dynamic head of 35' which is a combination of (A) and (B) in Fig. 2, but the Static Suction Head is not to exceed 25' (measured vertically) above the inlet valve from water level. This would leave a 10' Static Discharge Head (measured vertically). These figures are based on using a suction line of same nominal inside diameter as pump inlet (4"), and one elbow and are calculated at sea level atmospheric conditions.

For maximum pumping efficiency it is recommended that the discharge line be elevated above the height of the discharge valve. This retains a back pressure against the discharge valve on the suction stroke of the diaphragm.

Pump should be setting level and as close to the liquid to be pumped as possible.

Adequate working space should be provided around the pump for inspection and servicing.

CAUTION: Care should be exercised that the wire reinforced hose is not crimped or flattened as this will increase priming time and decrease pumping capacity.

8. Hose Installation — The suction and discharge hoses are equipped with Type B1 Rocker Lug Type Couplings and thread onto the inlet valve and outlet valve pipe nipples.

The connections are to be threaded tight especially on the suction side of the pump to prevent air leaks. Air leaks will increase priming time and reduce pump capacity.

A. Suction Hose — The hose connected to the inlet or suction side of the pump should be of the rigid type (non-collapsible). Hose should be free of any breaks, cuts, pin holes or have a collapsed liner. When the pumping application permits, the suction line should be kept as short as possible.

B. Discharge Hose — Hose on the outlet or discharge side of the pump may be of the collapsible type, but the rigid type is preferable. On long discharge lines, the line should be one size, and sometimes two sizes larger than the discharge fitting of the pump, in order to decrease frictional loss.

9. Movement to new worksite — Disconnect the suction and discharge hose from the pump. Drain pump body by removing the pump drain plug, reference, Fig. 7. If extremely hi-solid content water, mud or mucky water has been pumped, the pump body should be flushed out with clean water. The clean-out door may be removed for this purpose, reference, Fig. 3 and 7.

FIGURE 2A RECIPROCATING PUMP SERVICE POINTS AND ENGINE CONTROLS.

CHAPTER III - OPERATING INSTRUCTIONS

10. Starting - Fig. 2A.

- A. Fill engine fuel tank (1.5 gallons). Regular motor fuel "Mogas".
- B. Check engine crankcase oil level. Remove dip stick. Observe level indicated. Add oil if necessary. See Lubrication order TM 5-2805-257-14.
- C. Check oil level in pump reduction gearcase. Remove oil level plug. Oil should be to this level. Add oil if necessary.
- D. Hand turn down grease cup cap slightly on top of the connecting rod needle bearing to force grease to the bearing.
- E. Connect suction hose to pump and place in liquid to be pumped.
- F. Connect discharge hose and place accordingly.
- G. Remove pump body priming cap and fill pump body with liquid.
- H. Replace priming cap tight on pump body.
- I. Flip engine "on-off" switch to the "on" position.
- J. Close choke valve.
- K. Start engine with engine starter rope.
- L. Open choke valve slowly to obtain smooth engine operation.

11. Stopping - Fig. 2A - Shut off engine by flipping the "on-off" switch to "off" position. If pump is to remain in its present location, engine need only be shut off.

12. Normal operation - The operation of the pump is dependent on the volume or supply of liquid to be pumped. When shallow suction lifts with little liquid to be pumped is encountered, reduce engine speed. To govern the engine speed, loosen the spring loaded knurled knob. Actuate knob forward or back in slotted hole to gain the desired engine speed. This will reduce the load on the engine resulting in reduced fuel consumption. On high suction lifts, it will be necessary to keep the engine speed higher.

Although the diaphragm pump is self-priming, the initial prime can be speeded up as outlined under par. 10. Filling the pump body with liquid helps to seal off the inlet and outlet valves from taking in air.

13. Cold weather operation - Cold or freezing weather should not effect the operation of the pump as long as water is being drawn into and passed thru the pump body. However, at the close of pumping operations, the pump body should be thoroughly drained by removing the pump body and discharge valve drain plugs reference, Fig. 7. Leave drain plugs out if pump is to be left outside. Replace plugs before starting operation. If hi-solid content water has been pumped, remove the clean-out door, reference, Fig. 7 and flush out pump body with clear water.
14. Pump body clean-out door - Fig. 3 - A clean-out door is provided for quick inspection and clean-out. After pumping of muddy, sludge water, or water containing chemicals harmful to rubber, the pump body should be flushed out with clean water. Access to the inside of the pump body is made by removing four wing nuts holding clean-out door to pump body and remove door. Place door and rubber gasket. Turn wing nuts down tight.

FIGURE 3
END VIEW - PUMP BODY

CHAPTER IV – MAINTENANCE

15. Daily maintenance, reference Fig. 9.

- A. Fill engine fuel tank if necessary.
- B. Check engine crankcase oil level every 5 hours and change every 25 hours. Dip stick on side of engine. Add oil if necessary.
- C. Check pump gearcase oil level. Remove oil level plug on side of gearcase. Add oil if necessary.
- D. Check connecting rod bearing grease cup. To lubricate bearing, hand turn down grease cup cap one quarter turn, twice daily. Fill cup as required.
- E. Flush out pump body with clean water.
- F. During freezing weather, make sure pump body is drained after pumping. Remove suction line from liquid.

16. Semi-Yearly, reference Fig. 9.

- A. Engine – Consult "Engine Manual" (TM 5-2805-257-14).
- B. Pump gearcase – Drain, flush and refill gearcase to level plug. Capacity 2 pints.
- C. Connecting rod bearing grease cup. Remove cup from connecting rod. Clean, flush and refill cup.
- D. Inspect rubber diaphragm. Should the rubber show signs of cracking, replace the diaphragm. Refer to diaphragm replacement par. 18.
- E. Inspect the inlet and outlet rubber flap valves. Should the rubber flap valves show signs of wear or cracking, replace flap valves. Refer to pars. 19 and 20.
- F. Inspect the connecting rod needle bearing. Refer to connecting rod needle bearing replacement par. 21. If inspection indicates bearing is worn, it should be replaced.
- G. Wheel bearings – The wheels contain two sealed type ball bearings with no provision for lubrication. Bearings are presealed at the factory.

17. Service Check List

A. Priming

1. Initial prime – failure to prime initially may be due to:
 - a. Suction lift too high. Total lift must be no greater than 25 feet.
 - b. Suction leak – Check hose connections, check valve and seat gasket, diaphragm for cracks and make sure that inlet end of suction is submerged in liquid but not buried in mud and/or foreign matter.
 - c. Valve leak – Check for proper seating and easy operation.

2. Loss-of-prime – Loss of prime after initial prime has been established may be due to the same conditions as outlined above for initial prime.

B. Low Capacity

1. Failure to deliver rated capacity may be due to any of the following causes:
 - a. Suction lift too high. Reposition pump as required.
 - b. Discharge point too high. Change discharge system as required.
 - c. Suction leaks – Check as indicated under priming.
 - d. Collapsed suction line. Make sure suction hose lining is not loose, or line crimped.
 - e. Clogged suction – Clean suction inlet.
 - f. Reduced engine speed – Make sure engine is properly serviced and adjusted. (Connecting rod should operate at approximately 60 strokes per minute.)

C. Valve Noise

Both the suction and check valves should close with a distinct slap. A change to a very loud snap indicates excessively high suction and/or discharge. Make sure that the installation does not exceed the maximums. (Reference, Chapter II, Par. 7 and Fig. 2.)

FIGURE 9
LUBRICATION CHART

Engine Crankcase – Consult “Engine Manual” (TM 5-2805-257-14).

Connecting rod bearing grease cup – Hand fill as required.

MIL-G-10924A-GAA

Pump Reduction Gearcase – Check oil level daily – drain, flush and refill case to level plug every 1,000 running hours.

EP90-140 (MIL-L-2105, Grade 90)

Wheel Bearings – Sealed type ball bearing, no lubrication required.

18. Changing The Diaphragm (Fig. 4)

- A. With the pump body (B) drained, turn the engine starting pulley until the connecting rod is in its lowest position.
- B. Remove four bolts and nuts (G) holding pump body to the frame (C).
- C. Lift the combination pump top and frame upward as far as the holding chain will permit. The pump top and frame will position over-center and will be held in position by the holding chain. (Fig 7).
- D. The rubber diaphragm (D) is now fully exposed.
- E. Remove two $\frac{5}{8}$ " brass nuts (E) and remove diaphragm flange (F).
- F. Pull old rubber diaphragm (D) off pump. Clean the inner and outer diaphragm seating areas on pump with a steel brush.
- G. Position new rubber diaphragm (D) in place. Replace diaphragm flange (F) and secure with brass nuts (E). Tighten nuts (E) until diaphragm is slightly depressed. Remove preservative from new diaphragm.
- H. Swing the combination pump top and frame down to its normal position. Secure with the four bolts and nuts (G), taking up a like amount on each nut to equalize pressure on the rubber diaphragm edge.

- D. Rubber Diaphragm
- E. $\frac{5}{8}$ " Brass Nuts
- F. Diaphragm Flange
- G. Bolts and Nuts

19. Inlet Valve Repair (Fig. 3A)

The inlet valve is located at the inlet or suction side of the pump body, and is of the flap valve type. Depending on use and material pumped, wear will take place on Item (F), the rubber flap valve. Repair is as follows:

- A. With the suction line off (disconnected) and pump drained, or if working conditions permit, suction line may be left on the inlet valve, remove four $\frac{5}{8}$ " nuts and washers (V) from studs (A). Pull inlet valve free from pump body. Do not damage gasket (D). Save for reuse.
- B. Remove two brass screws (H), and keeper (G). Save for reuse. Remove two brass screws (C) with nuts and washers (X). Loosen and remove washer (E) and weight (J).
- C. With new rubber flap valve (F), reassemble flap valve assembly. Replace inlet valve assembly with gasket (D) on pump body and secure with the four $\frac{5}{8}$ " nuts and washers (V) on studs (A).

20. Discharge Valve Repair (Fig. 3A)

The discharge valve is located on the pump body opposite of the inlet valve and is of the flap valve type. Depending on use and material pumped, the rubber flap valve (N) will have to be replaced. Repair as follows:

- A. Remove four $\frac{5}{8}$ " hex nuts with washers (Y) from studs (U). Pull discharge valve body (S) off studs (U).

- B. Remove two brass nuts with washers (R) and two brass machine screws (K). Washer (L) and weight (P) may be pulled off rubber flap valve (N).

- C. Replace flap valve (N). Assemble items (K) thru (R) and place on pump body over the studs. Place valve body on pump over studs and secure with the $\frac{5}{8}$ " hex nuts.

21. Connecting Rod Needle Bearing Repair (Fig. 5)

The connecting rod (A) oscillates on the output shaft (B) of the reduction gearcase. Bearing replacement is as follows:

- A. Remove four bolts and nuts holding pump body to the frame. Reference Par. 18.
- B. Lift the pump top upward as far as the holding chain will permit. Block pump body in this position and remove rubber diaphragm. Ref. Par. 18.
- C. Remove cap screw (D) and keeper (E). Pull connecting rod (A) with bearing (C) off shaft.
- D. Press bearing (C) from bore of connecting rod. The grease cup (F) may be cleaned of any hard grease that may have accumulated. Repack grease cup. Ref. "Lubrication Chart."
- E. Press new bearing (C) into bore of connecting rod, then hand grease bearing.
- F. Replace connecting rod (A) with bearing (C) on shaft (B). Replace keeper (E) and tighten with cap screw (D). Hand turn grease cup cap down to force grease into bearing and grease channel. Refill grease cup to level.

G. Replace rubber diaphragm. Ref. Par. 18. Lower pump top down. Secure pump top to frame with the four nuts and bolts.

22. Gearcase (pump side) Disassembly and Assembly – (Ref. Fig. 6 and 7)

The entire power unit and gear train should be removed from the pump frame for bench work.

- A. Drain oil from the reduction gearcase.
- B. Disconnect connecting rod. Refer to Par. 21.
- C. Ref. Fig. 6. Remove the two $\frac{1}{2}$ " bolts, lock washers and nuts (B) holding gearcase to the gearcase support. Ref. Fig. 7. Remove two bolts with lock washers and nuts (D), Fig. 7, holding engine to frame. Save shims (C) Fig. 6, and shims (E) Fig. 7 for reuse.
- D. Lift reduction case and engine off frame for bench work.
- E. Twelve $\frac{5}{16}$ " cap screws (F) holding the cover halves together. Remove these bolts and pull reduction case assembly (H) from intermediate section (J). Gasket (G) should be replaced new in reassembly.
- F. Pry out snap ring (K) and pull spur gear (L) off pinion shaft (U). The $\frac{1}{4}$ " straight key may be saved for reuse if not damaged.
- G. Remove three $\frac{5}{16}$ " socket head cap screws with lock washers (M) and retainer (N).
- H. Straighten ear of lock washer (P). Remove lock nut (O) and washer (P). Pull output shaft crank arm (Q) from housing (A). Retain gear (R) from falling. Remove key (S) and manipulate gear (R) from housing. Remove spacer (T).
- I. Pull pinion shaft (U) with bearings (V) and (W) from housing. Bearings (V) and (W) may be removed from pinion shaft.
- J. Remove the two round head screws and oil trap (X), and snap ring (Y).
- K. Bearing (Z) may be pulled from bore of housing. Pull out spacer (AA) and pull out bearing (BB) from housing, and inner snap ring (Y).
- L. Assembly is in reverse of the above procedure.

23. Gearcase (engine side) Disassembly and Assembly (Ref. Fig. 6)

- A. Remove the $\frac{1}{4}$ " socket set screw and oil slinger (EE). Note position of oil slinger for reassembly to prevent damage to oil slinger.
- B. Remove five $\frac{1}{4}$ " cap screws with lock washers (DD). Housing (J), bearing retainer (FF), gaskets (GG), bearings (HH) and (JJ) with pinion shaft (KK) may now be pulled from housing (LL).
- C. Pull bearings (HH) and (JJ) off pinion shaft (KK).

D. Remove cap screw (MM) with lock washer and special washer (NN) from engine shaft (OO). Pinion (PP) is grooved for removal with a puller. Remove pinion. Remove woodruff key (RR) from shaft (OO).

E. Remove three cap screws (SS) and internal flat head cap screws (TT) from housing. Pull housing (LL) with gasket (UU) from engine housing.

F. Clean and inspect all parts. All gaskets should be replaced with new ones.

G. Assembly is in reverse of above procedure. Refer to lubrication chart for filling reduction case.

DISCHARGE SIDE OF PUMP

24. Wheels (Fig. 8)

The wheels are equipped with a cushion type tire (non-pneumatic) and contain two sealed type ball bearings at the hub. Bearings are pregreased and sealed.

To remove the wheel, remove the $\frac{1}{4}$ " x $2\frac{1}{4}$ " machine bolt with nut and lock washer (A). Pull off cap (B) and washer or washers (C). Pull wheel off axle.

FIGURE 8
WHEEL HUB ASSEMBLY

25. Lifting and Tie Down (Ref. Fig. 7)

The diaphragm pump is equipped with two combination lifting and tie down eyes located at the center of gravity of the pump.

APPENDIX A

BASIC ISSUE ITEMS LIST

Section I. INTRODUCTION

A-1. Scope

This appendix lists items which accompany the reciprocating pump or are required for installation, operation, or operator's maintenance.

A-2. General

This Basic Issue Items List is divided into the following sections:

a. Basic Issue Items -- Section II. A list of items which accompany the reciprocating pump or are required for the installation, operation, or operator's maintenance.

b. Maintenance and Operating Supplies - Section III. A listing of maintenance and operating supplies required for initial operation.

A-3. Explanation of Columns

The following provides an explanation of columns in the tabular list of Basic Issue Items, Section II.

a. Source, Maintenance, and Recoverability Codes (SMR), Column 1:

(1) Source Code indicates the selection status and source for the listed item. Source code is:

Code	Explanation
P	Applied to repair parts which are stocked in or supplied from GSA/DSA or Army supply system, and authorized for use at indicated maintenance categories.

(2) Maintenance Code indicates the lowest category of maintenance authorized to install the listed item. The maintenance level code is:

Code	Explanation
C	Operator/crew

b. Federal Stock Number, Column 2. This column indicates the Federal stock number for the item.

c. Description, Column 3. This column indicates the Federal item name and any additional description of the item required. A part number or other reference number is followed by the applicable five-digit Federal supply code for manufacturers in parentheses.

d. Unit of Issue, Column 4. This column indicates the unit used as a basis for issue, e.g., ea, pr, ft, yd, etc.

e. Quantity Incorporated in Unit Pack, Column 5. This column not applicable.

f. Quantity Incorporated In Unit, Column 6. This column indicates the quantity of the item used in the functional group.

g. Quantity Furnished with Equipemtn, Column 7. This column indicates the quantity of an item furnished with the equipment.

h. Quantity Authorized, Column 8. This column indicates the quantity of an item authorized the operator/crew to have on hand or to obtain as required. As required items are indicated with an asterisk.

i. Illustration, Column 9. This column not applicable.

A-4. Explanation of Columns in the Tabular List of Maintenance and Operating Supplies -- Section III.

a. Item, Column 1. This column lists numerical sequenced item numbers assigned to each component application to facilitate reference.

b. Component Application, Column 2. This column identifies the component application of each maintenance or operating supply item.

c. Federal Stock Number, Column 3. This column indicates the Federal stock number for the item and will be used for requisitioning purposes.

d. Description, Column 4. This column indicates the item and brief description.

e. Quantity Required for Initial Operation, Column 5. This column indicates the quantity of each maintenance or operating supply item required for initial operation of the equipment.

f. Quantity Required for 8 Hours Operation, Column 6. This column indicates estimated quantities required for an average eight hours of operation.

g. Notes, Column 7. This column indicates informative notes keyed to data appearing in preceding column.

A-5. Federal Supply Code for Manufacturers

Code	Manufacturer
97403	Army Engineer Research and Development Laboratories Fort Belvoir, Va.

APPENDIX B

MAINTENANCE ALLOCATION CHART

Section 1. INTRODUCTION

B-1. General

a. This section provides a general explanation of all maintenance and repair functions authorized at various maintenance levels.

b. Section II designates overall responsibility for the performance of maintenance functions on the identified end item or component. The implementation of the maintenance functions upon the end item or component will be consistent with the assigned maintenance functions.

c. Section III Not Applicable.

d. Section IV contains supplemental instructions, explanatory notes and/or illustrations required for a particular maintenance function.

B-2. Explanation of Columns in Section II

a. Group Number, Column 1. The functional group is a numerical group set up on a functional basis. The applicable functional grouping indexes (obtained from TB 750-93-1, Functional Grouping Codes) are listed on the MAC in the appropriate numerical sequence. These indexes are normally set in accordance with their function and proximity to each other.

b. Functional Group, Column 2. This column contains a brief description of the components of each functional group.

c. Maintenance Functions, Column 3. This column lists the various maintenance functions (A through K) and indicates the lowest maintenance category authorized to perform these functions. The symbol designations for the various maintenance categories are as follows:

- C - Operator or crew
- O - Organizational maintenance
- F - Direct support maintenance
- H - General support maintenance
- D - Depot maintenance

The maintenance functions are defined as follows:

- A - INSPECT. To determine serviceability of an item by comparing its physical, mechanical, and electrical characteristics with established standards.
- B - TEST. To verify serviceability and to detect electrical or mechanical failure by use of test equipment.
- C - SERVICE. To clean, to preserve, to charge, to paint, and to add fuel, lubricants, cooling agents, and air.
- D - ADJUST. To rectify to the extent necessary to bring into proper operating range.
- E - ALIGN. To adjust specified variable elements of an item to bring to optimum performance.
- F - CALIBRATE. To determine the corrections to be made in the readings of instruments or test equipment used in precise measurement. Consists of the comparisons of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared with the certified standard.
- G - INSTALL. To set up for use in an operational environment such as an emplacement, site, or vehicle.
- H - REPLACE. To replace unserviceable items with serviceable assemblies, subassemblies, or parts.
- I - REPAIR. To restore an item to serviceable condition. This includes, but is not limited to, inspection, cleaning, preserving, adjusting, replacing, welding, riveting, and strengthening.
- J - OVERHAUL. To restore an item to a completely serviceable condition as prescribed by maintenance serviceability standards using the Inspect and Repair Only as Necessary (IROAN) technique.
- K - REBUILD. To restore an item to a standard as nearly as possible to original or new condition in appearance, performance, and life expectancy. This is accomplished through complete disassembly of the item, inspection of all parts or components, repair or replacement of worn or unserviceable elements (items) using original manufacturing tolerances and specifications, and subsequent reassembly of the item.

d. Tools and Equipment, Column 4. This column is provided for referencing by code the special tools and test equipment, (Section III) required to perform the maintenance functions (Section II).

NONE USED

e. Remarks, Column 5. This column is provided for referencing by code the remarks (Section IV) pertinent to the maintenance functions.

B-3. Explanation fo Columns in Section IV

a. Reference Code. This column consists of two letters separated by a dash, both of which are references to Section II. The first letter references column 5 and the second letter references a main-

tenance function, column 3, A through K.

b. Remarks. This column lists information pertinent to the maintenance function being performed, as indicated on the MAC, Section II.

SECTION II - MAINTENANCE ALLOCATION CHART

APPENDIX C

REPAIR PARTS AND SPECIAL TOOLS LIST

Section I. INTRODUCTION

C-1. Scope

This appendix lists repair parts and special tools required for the performance of organizational, direct support, general support maintenance of the reciprocating pump.

C-2. General

a. The repair parts list is arranged as follows:

(1) Individual parts and major assemblies are listed alphabetically by item name within the numbered functional groups.

(2) Assembly components and subassemblies are indented and listed alphabetically by item name under major assemblies.

b. This Repair Parts and Special Tools List is divided into the following sections:

(1) Prescribed Load Allowance (PLA) - Section II. A consolidated listing of repair parts quantitatively allocated for initial stockage at the organizational level. This is a mandatory minimum stockage allowance.

(2) Special Tools, Test and Support Equipment - Section III. A list of special tools, test and support equipment authorized for the performance of maintenance at the organizational level. Not applicable.

(3) Repair Parts - Section IV. A list of repair parts authorized for the performance of maintenance at the organizational level.

(4) Repair Parts - Section V. A list of repair parts authorized for the performance of maintenance at the direct support, general support level.

(5) Special Tools, Test and Support Equipment - Section VI. A list of special tools, test and support equipment authorized for the performance of maintenance at the direct support, general support level. Not applicable.

(6) Federal Stock Number and Reference Number Index - Section VII. A list of Federal stock numbers followed by reference numbers, appearing in all the listings, in ascending alphanumeric sequence cross-referenced to index number.

C-3. Explanation of Columns

The following provides an explanation of columns in the tabular lists in sections II through VI.

a. Source, Maintenance, and Recoverability Codes (SMR).

Note. Common hardware items known to be readily available in Army supply channels will be assigned Maintenance codes only. Source codes, Recoverability codes, and Maintenance Allowances will not be assigned to this category.

(1) Source Code. Indicates the selection status and source for the listed item. Source codes used are:

Code	Explanation
P	Applied to repair parts which are stocked in or supplied from DSA/GSA or Army supply system, and authorized for use at indicated categories.
M	Applied to repair parts which are not procured or stocked but are to be manufactured at indicated maintenance categories.
A	Applied to assemblies which are not procured or stocked as such but made up of two or more units, each of which carry individual stock numbers and descriptions and are procured and stocked and can be assembled by units at indicated maintenance categories.
X	Applied to parts and assemblies which are not procured or stocked, the mortality of which is normally below that of the applicable end item, and the failure of which should result in retirement of the end item from the supply system.
X1	Applied to repair parts which are not procured or stocked, the requirement for which will be supplied by use of the next higher assembly or components.
X2	Applied to repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain them through cannibalization; if not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels.
C	Applied to repair parts authorized for local procurements. If not obtainable from local procurement, such repair parts will be requisitioned through normal supply channels with a supporting statement of nonavailability from local procurement.
G	Applied to major assemblies that are procured with PEMA (Procurement Equipment Missile Army) funds for initial issue only to be used as exchange assemblies at DSU and GSU maintenance level. These assemblies will not be stocked above DSU and GSU level or returned to depot supply level.

(2) Maintenance Code. Indicates the lowest category of maintenance authorized to install the listed item. The maintenance level codes are:

Code	Explanation
------	-------------

O	Organizational maintenance
F	Direct support maintenance
H	General support maintenance

(3) Recoverability Code. Indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are expendable. Recoverability codes are:

Code	Explanation
------	-------------

R	Applied to repair parts and assemblies which are economically repairable at DSU and GSU activities and normally are furnished by supply on an exchange basis.
T	Applied to high dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.
U	Applied to repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, high dollar value reusable casings or castings.

(4) This column also lists, below the SMR code, an index number for each item in ascending numerical sequence, which is used to locate items in the publication when the Federal stock number and/or reference number is known.

b. Federal Stock Number. Indicates the Federal stock number for the item.

c. Description. Indicates the Federal item name and any additional description of the item required. A part number or other reference number is preceded by the applicable five-digit Federal supply code for manufacturers in parentheses.

d. Unit of Issue. Indicates the unit used as a basis for issue, e.g., ea, pr, ft, yd, etc.

e. Quantity Incorporated in Unit Pack. Indicates the actual quantity contained in the unit pack.

f. Quantity Incorporated in Unit. Indicates the quantity of the item used in the functional group.

g. Fifteen-Day Organizational Maintenance Allowances.

(1) The allowance columns are divided into four subcolumns. Indicated in each subcolumn opposite the first appearance of each item is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have no entry in the allowance columns but will have in the description column a reference to the first appearance of the item. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period for the number of equipments supported. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the appropriate density column to obtain the total quantity of repair parts authorized.

(3) Organizational units providing maintenance for more than 100 of these equipments shall determine the total quantity of parts required by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 12; for 140 equipments multiply 12 by 1.40 or 16.80 rounded off to 17 parts required.

(4) Subsequent changes to allowances will be limited as follows: No change in the range of items is authorized. If additional items are considered necessary, recommendation should be forwarded to U. S. Army Mobility Equipment Command for exception or revision to the allowance list. Revisions to the range of items authorized will be made by this Command based upon engineering experience, demand data, or TAERS information.

h. Thirty-Day DS/GS Maintenance Allowances.

(1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have no entry in the allowance column, but will have in the description column a reference to the first appearance of the item. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for DS/GS levels of maintenance will represent initial stockage for a 30-day period for the number of equipments supported.

(3) Determination of the total quantity of parts required for maintenance of more than 100 of these equipments can be accomplished by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts required.

i. One-Year Allowances Per 100 Equipments/Contingency Planning Purposes. Indicates opposite the first appearance of each item the total quantity required for distribution and contingency planning purposes. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for one year.

j. Illustration.

(1) Figure Number. Indicates the figure number of the illustration in which the item is shown.

(2) Item Number. Indicates the callout number used to reference the item in the illustration.

C-4. Special Information

a. Repair parts for the gasoline engine, FSN 2805-072-4871 model 2A016-111 are not contained herein. See TM 5-2805-257-24P.

b. Repair parts mortality has been based on 3000 hours of operation per year.

c. Parts which require manufacture or assembly at a category higher than that authorized for installation will indicate in the source column the higher category.

d. The following publication pertains to the reciprocating pump and its components: TM 5-2805-257-14 and TM 5-2805-257-24P Engine, Gasoline: Military Standard Models (Model 1A08-111) 1½ HP, (Model 2A016-111) 3 HP.

C-5. How to Locate Repair Parts

a. When Federal stock number or reference number is unknown:

(1) First. Using the table of contents, determine the functional group or subgroup within which the repair part belongs. This will refer to a page in the parts listing.

(2) Second. The illustration column of the page refers to a figure number.

(3) Third. Locate the figure and identify the repair parts, noting the item number.

(4) Fourth. Refer back to the page of the parts listing. Find the item number in the illustration column that corresponds with the figure number.

b. When Federal stock number or reference number is known:

(1) First. Using the Index of Federal Stock Numbers and Reference Numbers, find the pertinent Federal stock number or reference number. This index is in ascending alpha-numeric sequence cross-referenced to an index number.

(2) Second. Using the Repair Parts Listing, find the index number referenced in the Index of Federal Stock Numbers and Reference Numbers.

C-6. Abbreviations

Abbreviations	Explanation
dia	diameter
mtg	mounting
sq	square
thd	thread
w	wide

C-7. Federal Supply Codes for Manufacturers

Code	Manufacturer
21335	Fafnir Bearing Co.
53786	Rex Chainbelt Inc.
	Construction Machinery Division
54275	Shadbolt and Boyd Co.
60399	Torrington Mfg. Co.
78252	Stolper Industries Inc.
80749	United Specialties Co.
81349	Military Specifications Promulgated by Standardization Div. Directorate of Logistics Services DSA
81910	Eaton Mfg. Co.
97403	Army Engineer Research and Development Laboratories

C-8. Recommendations for Maintenance Manual Improvements

Report of errors, omissions, and recommendations for improving this manual by the individual user is encouraged. Reports should be sub-

mitted on a DA Form 2028 (Recommended Changes to DA Publications)
and forwarded direct to commanding General, U. S. Army Mobility
Equipment Command, ATTN: AMSME-MPP, 4300 Goodfellow Boulevard,
St. Louis, Missouri 63120.
